

clamber stocks

...think play!

Unique
timber protection

The new **Clamber Stack** range from AE Evans provides high performance timber based play equipment that has been innovatively designed to replicate a natural, challenging and enjoyable play environment.

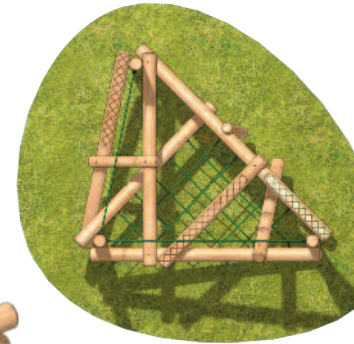

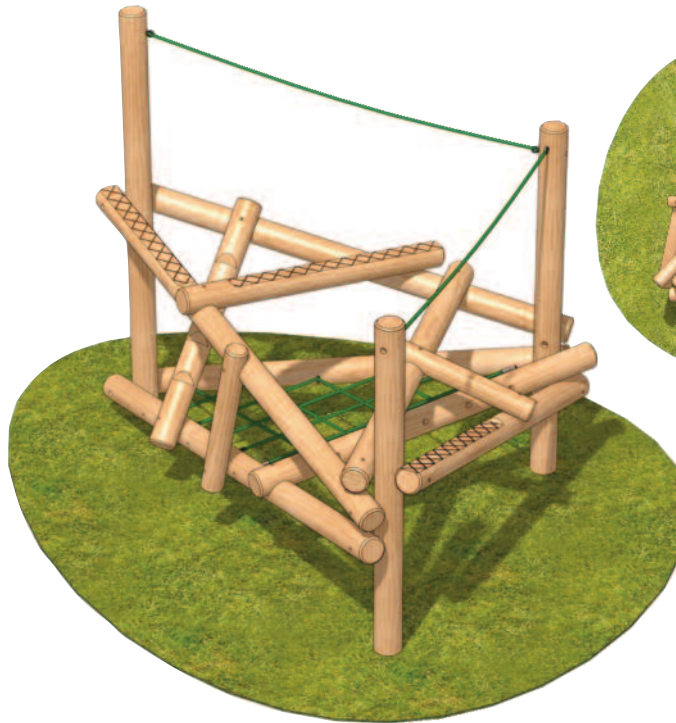

Using both timber and rope the **Clamber Stacks** encourage children to use their imagination and to develop both their physical and social skills.

The **Clamber Stacks** are predominately aimed at the trade for re-sale in to the play and leisure markets, and are manufactured on site by our own fully trained and experienced production staff using only sustainably sourced timber of the highest quality.

You can choose to have the **Clamber Stacks** produced from either UK grown Pine or Radiata Pine and they all come complete and ready to install with clear installation instructions and all components meet the requirements of BS/EN1176. Our customer focused service team is ready to meet your exact needs to ensure reliability in both production and delivery.

With either choice of species, all components are pressure treated with the leading new generation wood preservative - **Tanalith E**. This advanced protection allows us to offer extensive warranties against the threat of wood decay and insect attack even in ground contact, providing real assurances for you and your customer.
